Summary

Software Engineer II designing and building high-performance distributed systems, financial infrastructure, and AI-powered automation. Proven track record of architecting **0→1 platforms**, scaling systems supporting **₹150Cr+ (~$18M) monthly volume**, and building contractor lifecycle and compliance workflows protecting a **$10M+ product book**. Deep expertise in Python, event-driven architectures, API reliability, distributed data systems, and agentic AI (tool-calling agents, MCP, RAG, LLM evals, Claude Code), with a strong focus on reducing operational toil and accelerating engineering velocity.

Work Experience

Software Engineer II – Rippling, Bengaluru, India — May 2026 - Present

Leading architecture of contractor lifecycle & compliance platforms, scaling bulk workforce infrastructure, API reliability, and AI-powered operational automation.

- Designed and shipped an **MCP tool-calling LLM agent** across the Contractors stack, with **hybrid RAG + reranking** over runbooks and incidents, intent routing, and confidence-gated escalation in internal bots, reducing escalations from **25–30/week to <10** and eliminating **65%+** of recurring toil.
- **Architected and scaled contractor lifecycle infrastructure** for bulk onboarding, hiring, and transitions, and built a **0→1 automated attestation system** with **AI-assisted risk flagging** to surface worker-classification risk across a **$10M+** Contractor of Record book, replacing manual Legal/Ops review.
- Served as **DRI for API reliability**, defining **p95/p99** latency and error-budget SLOs with Datadog tracing across APIs; root-caused and fixed N+1 queries, retry storms, and missing timeouts/circuit breakers, closing **~70%** of reliability gaps week-over-week and reducing customer-facing tail latency.

Software Engineer – MoEngage, Bengaluru, India — Jul 2025 - May 2026

Backend engineer building GenAI automation, enterprise identity infrastructure, and fault-tolerant event-driven systems.

- Led **0→1** design and implementation of an automated IAM platform, engineering **JIT and SCIM provisioning** to eliminate manual enterprise onboarding; re-architected **OAuth 2.0 identity pipelines**, optimizing distributed session management to achieve a **4x increase** in system throughput at **sub-50ms** latency, and managed zero-downtime rollouts via ArgoCD on Kubernetes.
- Designed **fault-tolerant, event-driven pipelines** on **Kafka and Amazon SQS** to decouple core microservices, using **dead-letter queues and retry backoff**; built real-time observability via **AWS Alarms and Grafana**.
- Built **GenAI automation infrastructure** on **Vertex AI, n8n, and MCP**, orchestrating **multi-step agents** over CRM and product data to cut sales-deck generation from **8 hours to <2 mins (99%)**, and reducing prompt overhead by **60%** through reusable agent skills for code generation and debugging.

Software Engineer – Betterhalf.ai (YC W'21), Bengaluru, India — Jan 2023 - Jun 2025

Owned architecture of financial & booking platforms, scaling infrastructure to support 150Cr+ monthly transactions,enterprise-wide workflow automation.

- Led a pod of 2 engineers to architect a **high-throughput multi-rail payment engine** (UPI, instalments), **scaling capacity 10x at sub-100ms latency**; built a distributed state machine and double-entry ledger on PostgreSQL/Redis to enforce **idempotency** and **automate reconciliation** across ICICI and DBS rails.
- Scaled the Weddings marketplace to process **₹150Cr+ in monthly bookings** by migrating to a **decoupled microservices architecture**; engineered high-throughput discovery flows that drove a **3x boost** in organic visibility and **300%+ i**ncrease in venue engagement.
- Engineered a **0→1** asynchronous programming proposal engine utilising GCP Cloud Functions, Celery & distributed Task Queues. Orchestrated Canva-integrated microservices to slash generation time from **3 days to under 60s,** completely eradicating manual workflows.
- Led engineering across **monetization, growth, and automation platforms**, building real-time chat, CRM routing, dynamic pricing, and **recommendation systems** validated through A/B testing, generating **₹60K/day in new revenue**, improving lead conversion by **75%, delivering ₹6L/day in operational savings**, and cutting **QA turnaround by 40%**.

Technical Skills

Languages/Frameworks: Python, Java, GO, C++, Django, FastAPI, JavaScript, ReactJS, SpringBoot, Falcon, REST, GraphQL

Databases & Storage: PostgreSQL, MongoDB (Aggregation Pipelines, Indexing Strategies), Redis, SQL, S3, SupaBase

Distributed Systems & Infrastructure: Event-driven architectures (Kafka, Google Pub/Sub, Amazon SQS), Async task frameworks (Celery, Task Queue), Kubernetes, Docker, Airflow, AWS, GCP, Terraform, ArgoCD, Jenkins, Prometheus, Concurrency, Multi-threading, Datadog

AI/ML: Agentic AI, MCP, RAG, Embeddings, LLM Evals, Prompt Orchestration, LangChain, FAISS, Vertex AI, n8n, Claude Code, NumPy, Pandas

Domains: Agentic AI platforms, Payments & Financial Infrastructure, Identity & Access Management, High-Throughput Backend Systems, Marketplace Platforms, Developer Tooling, CI/CD, JIT compilation, Distributed Data Platforms

Projects

AI-Powered Semantic Search & Chat Assistant — **Link**

Built a production-grade Retrieval-Augmented Generation (RAG) system using LangChain, FAISS, and OpenAI embeddings for semantic retrieval over unstructured corpora; benchmarked chunking strategies and embedding configurations with retrieval eval pipelines to improve answer relevance and reduce hallucinations.

AkhandJyoti, Bihar | Enterprise Healthcare Operations Platform — **Link**

Solely designed and built booking infrastructure processing 100K+ daily transactions; optimized MongoDB and PostgreSQL via aggregation pipelines, compound indexing, and sharding to ensure high availability and eliminate write locks.

Thomas Scott | Automated E-Commerce Content & Listings Platform — **Link**

Built a comprehensive portal for Thomas-Scott to streamline product listings across **Ajio, Myntra, & Amazon**. Integrated WeShop AI canvas for automated & customizable e-commerce image/video generation,leveraging Java, SpringBoot &PostgreSQL for seamless content & listing management across multiple platforms.

Education

Bachelor of Technology in Information Technology

Manipal University Jaipur — CGPA: 8.4/10.0

Achievements

- Graduated in the **Top 5% of the cohort in the AI First Product Management fellowship** at Airtribe (Apr. 2025 – Jul. 2025).
- Awarded **Most Impactful Excellence Business Idea (Top 10%)** at the EngageAI Hackathon (Nov/ Dec. 2025).
